

Sleep Diary

Fill in the morning from memory. Rough estimates are fine - precision adds anxiety, not data. Print
one copy per week.

HOW TO USE

Before bed (10 sec)

Place a notepad + pencil on your nightstand. If you wake up during the night - make one tally mark. Don't check the clock. Don't pick up your phone.

Morning (2-3 min)

Within 15-20 minutes of waking, fill in today's column from memory. Count your tally marks. Estimate how long each waking lasted. Don't stress exact numbers.

End of week

Fill in the AVG column and calculate your weekly Sleep Efficiency. If it stays 85%+ for 5+ nights, you can move bedtime 15 min earlier next week.

WEEK _____ **DATES:** _____

	MON	TUE	WED	THU	FRI	SAT	SUN	AVG
EVENING CONTEXT (FILL BEFORE BED OR NEXT MORNING)								
Daytime nap? if yes, how many minutes								
Exercise? type + time (e.g. "run 6pm")								
Last caffeine at time of last coffee/tea/energy drink								
Alcohol? what + how much (or "none")								
Sleep aid? melatonin, magnesium, etc. + dose								
SLEEP DATA (FILL EACH MORNING FROM MEMORY)								

	MON	TUE	WED	THU	FRI	SAT	SUN	AVG
Got into bed time you physically got in bed								
Lights off / tried to sleep time you closed eyes to sleep								
Time to fall asleep estimated minutes								
Night wakings count your tally marks								
Total awake at night estimated total minutes awake								
Final wake-up time time you woke up for good								
Got out of bed time you actually left bed								
Total sleep (your estimate) how long you feel you actually slept (h:mm)								
RATINGS								
Sleep quality 1 (very poor) to 5 (very good)								
CALCULATED (DO AT END OF WEEK)								
Time in bed "got in bed" to "got out of bed"								
Sleep Efficiency % sleep time / time in bed x 100								
Notes anything unusual (stress, travel, illness)								

Sleep Efficiency Formula

Total sleep time / Total time in bed x 100 = SE %

Weekly Avg SE: _____ %

Target: **85%+** = healthy. Most people start at 65-75%. Below 85% = room to improve.

SE 85%+ for 5+ nights in a row = you can expand your sleep window (move bedtime 15 min earlier).

Add 7 daily SE values, divide by 7.

Compare to previous weeks.

Prev week SE: _____ **%**
